

2030 SUSTAINABILITY COMMITMENT

One of TRISON´s fundamental objectives is to provide information and transparency to all stakeholders involved in the development of its activities. Therefore, in 2020, we began a process of communicating our fundamental actions, as well as the main performance indicators of our business group in the economic, environmental and social spheres.

We are aware that few companies of our size have adopted a strategic vision in social terms based on Sustainable Development and the Rio Principles, which requires a high degree of commitment and consistency. These and other initiatives make us pioneers in the adoption of practices consistent with Corporate Social Responsibility within our sector of activity. Our commitment is to monitor and evaluate these practices through set objectives, monitoring indicators and achieved goals, reporting on all of this and making our achievements public.

The United Nations Sustainable Development Goals point to a path that is not only appropriate but essential. A path that companies, led by their leaders, must follow in order to show society that there is another way of doing business, that it is possible to go beyond individual profits. Because companies are the people who make them up and the society in which they operate.

That is why at TRISON, like more and more companies around the world, we are making public our commitment to Vision 2030, in line with the United Nations Sustainable Development Goals. And we are committed to advancing year after year on this path to achieve the goals we have set for ourselves.

Due to the nature of our activity, our contribution will focus primarily on SDGs 3,5,7,8 and 13.

Although TRISON´s activities focus on these SDG´s, as the goals and targets of the 2030 Agenda are interrelated and cross-linked, they directly influence other SDGs.

TRISON is committed to long-term continuity through a sustainable business model capable of responding to future challenges and based on criteria of excellence, innovation, integrity and transparency, in order to reconcile the Group´s activity with environmental care and the generation of shared value through partnership with its environment.
